

PRL DHA

\$101.20 inc GST

PRODUCT SUMMARY

- Delivers DHA (docosahexaenoic acid), a key omega-3 fatty acid
- Promotes superior brain, nervous system, eye, and heart health*
 - Vegan-friendly DHA sourced from deep sea marine algae

MORE INFORMATION

Docosahexaenoic acid (DHA) is a key component of the membranes that make up the central nervous system. This beneficial acid is a polyunsaturated omega-3 fatty acid found throughout the body but most abundantly in the brain, eyes, and heart.

At last, DHA from a high-quality, pure plant source (from deep-sea marine algae) is now available. Premier Research Labs', Plant DHA has gone straight to the source, producing DHA from the same microalgae sources fish get from. Most people know that fish are a rich source of DHA, but they don't know that fish get DHA from the algae they eat in their food chain.

Plant DHA is a vegetarian source of DHA grown in a controlled environment manufactured from algae. The process begins with the initial algae cell culture and results in highly purified DHA oil. The microalgae are grown in fermentors and then harvested and processed to extract the clear, amber-colored oil delivering DHA.
